

Pre-Conference Course: Craniofacial Distraction Techniques

Explore the intricacies of craniofacial distraction techniques in this comprehensive pre-conference course featuring lectures, live demonstrations, and interactive table discussions with seasoned mentors. The curriculum is meticulously designed to provide participants with valuable insights into diverse distraction techniques applied in craniofacial skeleton surgeries. Topics covered include indications, a detailed examination of various distractor devices, vector planning, operative tips, presentation of surgical videos, and comprehensive discussions on the avoidance and management of potential complications.

Course Highlights:

1. **Introduction to Various Distractor Devices:** Gain a comprehensive understanding of different distractor devices employed in craniofacial surgeries.
2. **Technical Tips for Cranial, Midface, Monobloc, Maxillary, and Mandibular Distraction:** Receive practical insights and technical tips for effective distraction in different regions of the craniofacial skeleton.
3. **Demonstration on Skull Models:** Witness live demonstrations on skull models to enhance your hands-on understanding of craniofacial distraction techniques
